

Total pizzas per order

% of total orders by table type

The formula being used for the chart on the right to calculate the probable amount of the seating that would be needed based on our table seating capacity assumption:

$$2 \text{ (seats)} * 42.35\% + 4 \text{ (seats)} * 44.28\% + 6 \text{ (seats)} * 13.37\% = 3.4$$

Max available seating vs Seating utilized
